

## PENCIL WRITING INSTRUMENT

The present invention is a writing instrument, namely, a **pencil** having a writing **medium that is delible**. The delible medium may be selected from the group **consisting of lead, graphite, charcoal and wax**. The delible medium is formed as **an inner core** and the inner core is surrounded by **an outer core**. The outer core is comprised of **wood**. The inner core and the outer core preferably are **cylindrical**, but may be any suitable geometric shape, such as **rectangular or hexagonal**.

To use the pencil, a proximal end of the pencil is sharpened to a point to expose the delible medium. The delible medium is then applied to a writing surface, such as paper.

Optionally, a **distal** end of the pencil may accommodate an **eraser** to erase the delible medium as applied to paper. The eraser is attached to the distal end of the pencil by a **ferrule**.

Optionally, the outer core may be coated or covered in **paint**. Further optionally, the paint may be **imprinted** with a message.

---

The invention claimed is:

1. A pencil comprising:
  - an inner core of a delible medium; and
  - an outer core of wood;wherein the inner core is surrounded by the outer core.
2. The pencil of Claim **1**, further comprising:
  - an eraser; and
  - a ferrule, wherein the eraser is attached to the ferrule;further wherein the ferrule is attached to a distal end of the outer core.
3. The pencil of Claim **1** further comprising a coat of paint on the outer wood core.
4. The pencil of Claim **3** further comprising an imprint on the paint.
5. A pencil comprising:
  - an inner core of a delible medium;
  - an outer core of wood; wherein the inner core is surrounded by the outer core;
  - an eraser; and
  - a ferrule, wherein the eraser is attached to the ferrule, further wherein the ferrule is attached to a distal end of the outer core.
